

Dear AME colleague,

Over the last few months the Medical System Replacement Project team has been busy preparing for the selection of a new system to replace MARS/AME Online. I am pleased to confirm that, following the conclusion of the procurement phase, we have selected the Cellma product, supplied by RioMed Ltd <http://www.riomed.com/cellma>.

Cellma is an online web based system which will provide a much higher level of resilience than currently experienced with the MARS/AME Online systems and it is anticipated that it will be implemented by the end of the year . Amongst many other anticipated benefits, Cellma will also allow you to communicate with applicants and the CAA via secure messaging and upload documents to individual applicants' records.

The project is now moving to the delivery phase. We will continue to keep you updated on the progress of the project, including the delivery timeframes, the intended training schedule and training resources & facilities that will be made available to you.

I would particularly like to thank Dr Alan Downie and Dr Bruce Alexander for their valuable input into, and engagement on, the project to date and for their continued support. We envisage that further AME support will be needed to test and validate the new system and would welcome expressions of interest via email to Nigel.Nicholas@caa.co.uk from anyone interested in participating in this work.

Kind regards

Sally
