JAA Class 1/2 certification - Ectopy

Ventricular Premature/ Aberrant beats noted on resting ECG

Remains Fit

unless symptomatic

Holter 24 hour ECG recording (to be performed within one month)

Futher investigation indicated (note 1)

NOTES:

1) Further investigation needed if a) >2% Ventricular Ectopic Beats (VEBs) recorded in 24hrs

b) complex forms seen

c) long runs of bigeminy seen

d) >20 VEBs per minute seen

- 2) By a cardiologist acceptable to the Aeromedical Section (AMS):
- 3) Exercise ECG Bruce protocol and symptom limited. Requirements are at least 9 minutes and no significant ECG or blood pressure changes. (See UK CAA exercise ECG protocol). Any abnormality may require further investigation .
- 4) Echocardiogram Should reveal a structurally normal heart with normal LV/RV function.
- 5) The cardiology report will be reviewed by the AMS. It may be necessary to see the investigations in which case the actual tracings/videos will be requested. In difficult cases a secondary review panel of cardiologists will be convened.
- 6) If the above investigations show a significant abnormality, an OML/OSL limitation may be needed. Periodic cardiological review may be required.

Cardiology review (note 2)
Exercise ECG (note 3)
Echocardiogram (note 4)
Cardiac MRI if ectopy originates from RV

Review and investigations acceptable (note 5)
