

Civil Aviation Authority MANDATORY PERMIT DIRECTIVE

Number: 2020-005

Issue date: 28 September 2020

In accordance with 41(1) of Air Navigation Order 2016 as amended the following action required by this Mandatory Permit Directive (MPD) is mandatory for applicable aircraft registered in the United Kingdom operating on a UK CAA Permit to Fly.

Type Approval Holder's Name: <i>Vickers Supermarine</i>		Type/Model Designation(s):
		Vickers Supermarine Spitfire and Seafire aeroplanes
Supersedure:	This MPD supersedes	s MPD 1999-007 dated 9 April 1999
Title:	Main Landing Gear S	upport Eye bolts
Manufacturer:	Vickers Supermarine	/Westland Aircraft Ltd
Applicability:		/ Westland Aircraft Spitfire and Seafire aeroplanes numbers).
Reason:	 (All marks and serial numbers). In 1999, several examples of cracked main landing gear support eye bolts were found. The affected part is the eye bolt attaching the main landing gear locking pin crescent bracket to the inboard support stay (Drawing. Ref. 30050 Sheet 11). Failure of the eye bolt may lead to collapse of the gear during landing, with potential turnover of the aircraft. MPD 1999-007, which is now superseded, required an initial Magnetic Particle Inspection (MPI) of the eyebolt, with a repeat MPI required at intervals not exceeding 100 landings. In-service cracking of the eye bolt is still experienced to date, although there appears to be a variation in findings from the inspection relative to the runway surface generally used by the aircraft. Considering elapsed time since the issue of the original MPD and with further in-service data and experience gathered from both maintenance organisations and aircraft operators, this MPD has been raised to supersede MPD 1999-007 through clarification of the requirements stipulated in the original MPD. Furthermore, the intervals have further been revised based upon in-service data resulting from the mandatory inspections required by MPD 1999-007. 	
Effective Date:	12 October 2020	

 Serviceable Part(s): OEM or newly manufactured Main Landing G Support Eye Bolts (port and starboard), having satisfactorily passe Non-Destructive Test (NDT) Examination in accordance with approved technique (See Remark 2). Accomplishment Instructions: From the effective date of this MPD at the next scheduled M Landing Gear Support Eye Bolt inspection (iaw MPD 1999-007) at next Annual, whichever comes first: (1) Verify the configuration of mating parts (eye bolt, lock cresce and their mod-state to ensure compatibility in accordance of OEM data. (2) In accordance with the relevant maintenance instruction remove the affected part from the aircraft. (3) Carry out an NDT Examination on the affected part 	ear
 From the effective date of this MPD at the next scheduled M Landing Gear Support Eye Bolt inspection (iaw MPD 1999-007) at next Annual, whichever comes first: (1) Verify the configuration of mating parts (eye bolt, lock cresce and their mod-state to ensure compatibility in accordance of OEM data. and their mod-state to ensure compatibility in accordance of OEM data. (2) In accordance with the relevant maintenance instruction remove the affected part from the aircraft. (3) Carry out an NDT Examination on the affected part	
(3) Carry out an NDT Examination on the affected part	
	ns,
accordance with an approved technique (See Remark 2).	in
 (4) If any affected part is found cracked or an indication is no after undertaking the actions specified in paragraph (3) about carry out the actions specified in paragraphs (8) to (11). 	
(5) After installation of a serviceable part, ensure the corrigeometrical assembly / alignment of the Eye Bolt, L Crescent and Crescent Locking Arm Head in accordance v OEM data. The Eye Bolt should sit squarely to the L Crescent with appropriate shim washer under the head of affected part.	ock vith ock
NOTE: Incorrect geometrical assembly / alignment can significa affect the pre-loading of the components, which may affect longevity of said components.	
Depending on the type of runway surface utilized, at the follow landing intervals thereafter, accomplish either (6) or (7) below:	ng
(6) For aircraft operating from predominantly hard runway surfa (80% or more in last 1-year period), every 300 landings ca out the actions of paragraphs (1) to (5) above.	
(7) For aircraft operating from grass surfaces for 20% or m landings in the last 1-year period, every 150 landings carry the actions of paragraphs (1) to (5) above.	
In the event of any recorded hard landing, within 10 landings ca out the actions as specified in paragraphs (1) to (5).	

Compliance/Action Cont:	Complete the following actions if any affected part is found cracked in service:	
	(8) Complete a Mandatory Occurrence Report; and	
	(9) Quarantine the affected part for investigation and replace with a serviceable part; and	
	(10) Carry out the post-installation check as specified in paragraph (5) above.	
	(11) Carry out the actions as specified in paragraphs (1) to (5) within <u>100 landings</u> from installation of a serviceable part before returning to the intervals specified in paragraphs (6) or (7).	
	From the effective date of this MPD, do not install an affected part on any aeroplane unless paragraphs (1), (3), (4) and (5) have been complied with satisfactorily.	
ENSURE COMPLIANCE WITH THIS MPD IS RECORDED IN THE AIRCRAFT/ENGINE LOGBOOK
