

Civil Aviation Authority

# EMERGENCY MANDATORY PERMIT DIRECTIVE

Number: 2026-002R1-E

Issue date: 06 February 2026

In accordance with 41(1) of Air Navigation Order 2016 as amended the following action required by this Mandatory Permit Directive (MPD) is mandatory for applicable aircraft registered in the United Kingdom operating on a UK CAA Permit to Fly.

**Design Approval Holder's Name:**

**Type/Model Designation(s):**

Ascent Industries Ltd (T/A EuroFOX Aviation)

Eurofox aircraft, all models

Effective Date:	Revision 1: 09 February 2026 Original Issue: 12 January 2026
TADS / AAN (as applicable):	TADS 376 (LAA), TADS BM85 (BMAA), HADS HM18 (BMAA)
Foreign AD (if applicable):	N/A
Revision:	This MPD revises CAA MPD 2026-002-E dated 09 January 2026

## Rudder Control System – Rudder Pedal/Rudder Pedal Torque Tube – Inspection

**Manufacturer(s):**

Various

**Applicability:**

Eurofox aircraft, all models, all serial numbers.

**Reason:**

There have been five reported instances in the UK of Eurofox aircraft experiencing cracking in the vicinity of the welded joint between the rudder pedals and the rudder pedal torque tube on the right rudder bar, leading to the pedal no longer being rigidly attached to the torque tube. One event was potentially linked to a seized toe brake pivot pin, causing additional force to be transmitted through the joint. More detail of the failures (including images) can be found within the LAA's MTD-05-2025 Issue 4 (or later issue) which can be found on the [LAA website](#).

Despite on-going investigations, the exact cause or mechanism of the failure has not been positively identified. Whilst the failures have so far affected aircraft involved in towing gliders, all the circumstances and factors potentially influencing each of the failures are not unique to aircraft used in this type of operation.

This condition, if not detected and corrected, could lead to a loss of control of the aircraft.

For the reasons described above, CAA issued MPD 2026-002-E which required a repetitive inspection to detect and correct any potential cracking in this area.

This MPD retains the requirements of CAA MPD 2026-002-E at original issue and is revised to allow embodiment of a modification which can be terminating action for the repetitive inspection.

This MPD is considered as an interim action and further MPD action may follow. The manufacturer in cooperation with the BMAA, LAA and the CAA are actively working towards a solution.

**Required Action(s) and Compliance Time(s):**

Required as indicated by this MPD, unless the action(s) required by this MPD have already been accomplished.

**Inspection:**

From 12 January 2026 (the effective date of this MPD at original issue), before next flight, and thereafter at an interval not to exceed 10 flying hours:

- (1) Using a mirror and light source as necessary, inspect the welds joining the rudder pedals to the horizontal torque tubes for any signs of cracking, deformation, flexibility, or any other anomaly. Particular care should be paid when inspecting the welds nearest the firewall.

NOTE 1: The inspection required by paragraph (1) above shall be accomplished by a competent person authorised by the approved organisation supporting the aircraft (BMAA/LAA).

**Corrective Action(s):**

If, during the inspection as required by the above paragraphs, any of the above defects are detected:

- (2) Before next flight, remove the part and replace it with a new or serviceable part. Continue inspecting the replacement part in accordance with paragraph (1) above every 10 flying hours, unless the replacement part has embodied the terminating action below.
- (3) Report the defect to the design approval holder and supporting organisation for the aircraft (LAA/BMAA).

NOTE 2: The corrective action required by paragraph (2) above shall be accomplished in compliance with the procedures of the approved organisation supporting the aircraft (BMAA/LAA). When specified on the conditions of the National Permit to Fly, the aircraft shall be certified as fit for flight through the issue of a Permit Maintenance Release (PMR).

**Terminating Action:**

- (4) Modification of an aeroplane in accordance with the instructions of LAA standard mod 16826 or LAA repair 1466 constitutes terminating action for the repetitive inspections required by paragraphs (1) and (2) above.

EuroFOX Aviation SB#6 Issue 2, dated 9 January 2026.

**Remarks:**

1. Inspections already carried out before the effective date of this MPD under LAA MTD-05-2025 Issue 4 (or earlier issue) or EuroFOX Aviation SB#6 Issue 2 dated 9 January 2026 (or earlier issue), are accepted as demonstrating compliance with the initial actions specified in paragraph (1) of this MPD, provided the aircraft has not flown 10 hours since any last inspection of the welds.
2. The safety assessment has warranted immediate publication and notification without implementing the full consultation process.
3. If requested and appropriately substantiated, the CAA can approve Alternative Methods of Compliance for this MPD.
4. Information about any failures, malfunctions, defects or other occurrences, which may be similar to the unsafe condition addressed by this MPD, and which may occur, or have occurred on a product, part or appliance not affected by this MPD, can be reported to the [CAA occurrence reporting system](#). This may include reporting on the same or similar components, other than those covered by the design to which this MPD applies, if the same unsafe condition can exist or may develop on an aircraft with those components installed.
5. Enquiries regarding this MPD should be referred to: [ga@caa.co.uk](mailto:ga@caa.co.uk)
